CONCENTRATE

## Organic Lawn & Garden Fertilizer

**For all lawns & Gardens. Non-burning. 100% money-back guarantee.**

Country Select Organic Fertilizers are made from a unique process, from farm-raised catfish that produces a non-burning, organic fertilizer for both fast and long-lasting greening that feeds the whole plant. Our organic catfish protein contains the three primary plant nutrients Nitrogen, Phosphorus and Potash. Mega-Green has received the WSDA (Washington State Dept. of Agriculture) listing for use on organically-grown crops.

**DIRECTIONS: Shake Well Before Using.**

**FOR USE WITH HOSE-END SPRAYER OR PUMP SPRAYER:** Spray lawn at ratio of 4 ounces **Mega Green** per gallon of water. Apply at a rate of 4 ounces of **Mega Green** per every 500 sq. ft. of lawn. Spray during the early morning or at sunset. Apply in 2 directions to insure uniform coverage. First application should occur after the frost ends. Apply every 2-6 weeks throughout the growing season, depending on the growth and color desired. When used as directed, this product supplies 0.154 pounds Nitrogen per 1000 sq. ft. during a typical growing season. Lawns typically require 1 pound Nitrogen per 1000 sq. ft. per typical growing season. Apply additional applications of this product or other organically-approved Nitrogen materials to achieve the remaining requirement. **FOR USE ON PLANTS & VEGETABLES:** Mix 4 oz. **Mega Green** per gallon of water. Using watering can or hose sprayer, apply directly onto leaves and flowers. Apply during early morning or at sunset. Re-apply every 2-4 weeks during growing season. Mixture should be used completely. The WSDA seal lists **Mega Green** for all your organically-grown plants.
